Consolor Hybrid Seating System

The **Consolor Hybrid Seating System** can be any combination of the seating systems available from Consolor Ltd. In order to meet the specific needs of clients, sometimes it is more appropriate to use an amalgamation of different seats with different functions and features. For example the ideal seat might be a carved foam cushion with a matrix back support. The exact choice of seat can be decided after the moulding process.

Some examples of a Consolor Hybrid seat are:

- MaTRx seat back with swing away thoracic supports and a carved seat base cushion.
- Matrix backrest with a carved foam seat cushion.
- Lynx back support with a Vi cushion.
- Carved foam back support in a Delfi Pro dynamic seat.
- We can also fit contoured cushions into a clients existing seating system, if they are requiring more support than they did when the seat was initially supplied.

- We are also able to manufacture seats around other specialized products such as gel or air cushions.
