

The Consolor Carved Foam Seating System (CFSS) is a completely bespoke product that is built entirely around the client's individual needs, providing the ultimate in pressure relief, support and positioning.

Benefits of CFSS

- Different types or combinations of foam can be used to provide the required levels of pressure relief and support
- Minor adjustments can be made if necessary by cutting or adding foam where appropriate
- As the contours of the seat are not visible from the outside, any postural asymmetry is hidden
- Covers available in a range of colours and fabrics and are easily removed to allow for cleaning. Extra sets can also be ordered
- Can be put on to most wheelbases including electric
- Low on maintenance requirements

How it works

An assessment is carried out in order to determine the client's physical, social and environmental needs and to decide whether a CFSS is the most suitable system to meet all of the outlined needs.

The client is then moulded using a beanbag - which is then scanned and the measurements are sent to our factory in Bournemouth.

Using the measurements, the shape is carved using Ronnie the robot (as shown below) and is then finished by our in-house technicians.

All of our CFSS are made in the UK and this is reflected in the highest standards in which they are made to.

Ronnie the Robot at our workshop in Bournemouth.
