

Spacer Fabric

100% polyester

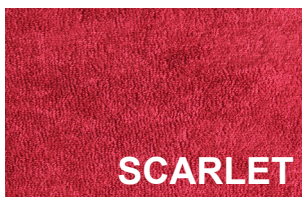

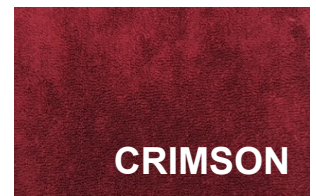

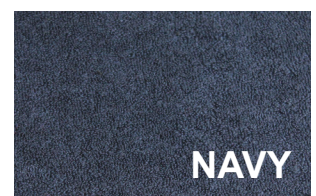

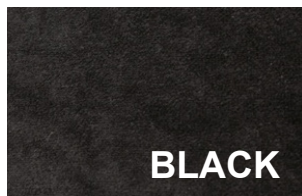

Spacer fabric used by Consolor consists of a 4mm thick, three-dimensional construction, which appears as two horizontal layers of fabric held apart by vertical fibres. It is one complete piece of woven fabric, making it very strong, plus there are fewer chances of creases appearing in an upholstered contoured surface. It is very capable of contouring to a compound curved surface.

The "space" in between the two layers allows a layer of air to be present. This layer of air allows air circulation, which reduces heat build-up and provides high moisture transfer or "wicking" effect. Additional benefits include comfort cushioning and shock absorbency with excellent shape recovery and improved wear resistance. All features are significantly better when compared to foam and multi-layer fabrics. Consolor spacer fabrics are machine washable and will not de-laminate or break down. Covers will also dry quicker due to the open cell structure of the material.

Terrycloth Towelling

100% polyester

We also supply black Dartex.

Consolor is ISO 9001 accredited
